PABLO MOSCARDO

Senior Software Engineer | AI/LLM Specialist & Full Stack Developer

📧 pablo.ezequiel.moscardo@gmail.com · 📱 +54 9 3492 640293 · 🌍 Argentina (Remote, LATAM/Global)

🔗 LinkedIn · 💻 Portfolio · 🐙 GitHub · 🌍 Web

Professional Summary

Systems Engineer with 20+ years of experience in software development, specialized in recent years in AI/LLM integration, RAG architectures, and Full Stack development with Python, TypeScript, PHP (Laravel), and the React/Next.js ecosystem. I combine senior-level software architecture expertise (modular, hexagonal, domain-driven) with hands-on execution, leading projects end-to-end — from design and cloud infrastructure through production deployment and maintenance of applications with real users. Strong foundation in software engineering best practices (Clean Code, OOP, design patterns, Agile/Scrum methodologies) and quality assurance (functional, UI, and E2E testing). Focused on building robust, scalable, maintainable solutions — not demos, but real products used by real customers.

Availability: Remote, full-time or freelance · Work mode: LATAM / Global · Timezone: GMT-3 (overlaps with US Eastern/EU business hours)

Technical Stack

- **AI / LLM:** LangChain, RAG architectures (retrieval, chunking, embeddings, re-ranking), OpenAI API, Qdrant, pgvector, agentic workflows, MCP (Model Context Protocol)
- **Backend:** Python (FastAPI, Django), Node.js, PHP (Laravel, modular/hexagonal architecture), REST APIs, GraphQL, OpenAPI/Swagger documentation
- **Frontend:** TypeScript, React (18/19), Next.js, Vite, React Router, Tailwind CSS
- **Cloud / AWS:** AWS Lambda, S3, EC2, API Gateway, IAM, Step Functions, CloudWatch, serverless architectures
- **DevOps / Infrastructure:** Docker, Docker Compose, Nginx, Redis, Git, GitHub Actions, CI/CD, Linux server administration
- **Databases:** PostgreSQL, Supabase (Row Level Security - RLS), MongoDB
- **QA & Testing:** Functional, UI, and End-to-End (E2E) testing; Appium (cross-platform), XCUITest (iOS), Espresso (Android); regression testing
- **Methodologies & Best Practices:** Agile / Scrum, Clean Code, Object-Oriented Programming (OOP), design patterns, domain-driven architecture
- **Other:** Algorithmic trading, quantitative analysis, workflow automation with n8n, payment

integrations (MercadoPago)

Professional Experience

Founder / Full Stack Developer — NBM Systemas

2023 — Present

- Design and development of custom software solutions for SMBs, including point-of-sale systems, digital catalogs, loyalty ecosystems, and AI-powered conversational bots.
- **Wazyloop (Taxi Rosario):** full stack development as a freelance consultant for a loyalty platform connecting taxi drivers and local merchants in Rosario, currently live in production with real users. Backend built with Laravel 13 (PHP 8.3) using a modular/hexagonal architecture (Merchants, Drivers, Cash Vouchers, Subscriptions, Vehicles domains) and a RESTful API fully documented with OpenAPI 3.1 (35 endpoints). Frontend built with React + Vite (TypeScript, Tailwind CSS), including a public landing page, an admin dashboard (metrics, charts, CRUD), and a map app for ride dispatch and real-time driver tracking. Dockerized infrastructure (Nginx, PostgreSQL 16, Redis) and Git Flow + Conventional Commits workflow.
- Built an AI-powered WhatsApp bot for customer service and order management, integrated with Supabase and n8n (JLF project).
- Developed a POS (Point of Sale) system with React and PostgreSQL for sales and inventory management (RapiVenta POS project).
- End-to-end database architecture, authentication (NextAuth), and payment integrations (MercadoPago).

Senior Developer / Independent Consultant

Various projects — Ongoing track record

- Full stack development with Next.js, Supabase, and Vercel for production web applications.
- Business workflow automation with n8n connecting WhatsApp, databases, and AI services (OpenAI, OpenRouter, Gemini).
- Linux infrastructure administration, server configuration, and advanced development environments (i3wm, tmux, Neovim/LazyVim) oriented toward technical productivity.

Algorithmic Trading Analyst

Personal project — "Fucking Trading"

- Development of algorithmic trading strategies and quantitative market analysis.
- **Quantum Llama Terminal:** built an institutional-grade desktop trading platform with Machine Learning/Deep Learning integration (PyTorch, Transformers, XGBoost) for signal generation, a backtesting engine (VectorBT), and advanced order flow visualization (footprint charts, bookmap/DOM). Multi-broker support (MetaTrader 5, CCXT for crypto

exchanges, NinjaTrader/Tradovate). Distributed as a native desktop app for Windows and Linux. llamaquant.nbmsystemas.com

- Execution infrastructure management with AMP Global/Futures demo accounts.
- Community building and educational content on trading for a Spanish-speaking audience.

Featured Projects

Wazyloop — Loyalty Ecosystem for Taxis and Merchants (Rosario)

2025 — Present

Enterprise-grade technological platform, live in production with real users, connecting taxi drivers with local merchants through a points-and-discounts loyalty loop. Modular/hexagonal architecture separating business domains (Merchants, Drivers, Cash Vouchers, Subscriptions, Vehicles), RESTful API documented with OpenAPI 3.1, and authentication via Laravel Sanctum. Includes a public landing page, an admin dashboard with metrics and KPIs, and a map app for ride dispatch and real-time driver tracking.

Stack: Laravel 13 (PHP 8.3) · React + Vite (TypeScript, Tailwind CSS) · PostgreSQL 16 · Redis · Docker / Docker Compose · Nginx · Git Flow + Conventional Commits

Quantum Llama Terminal — AI-Powered Algorithmic Trading Platform

Own project — Active development

Institutional-grade desktop trading platform for both manual and algorithmic trading across TradFi and crypto (DeFi). Electron frontend paired with a high-performance Python (FastAPI) backend. Integrates Machine Learning and Deep Learning models for predictive market analytics, a custom backtesting engine, and advanced order flow visualization (footprint charts, bookmap/DOM, tick-level microstructure analysis). Supports multiple brokers and exchanges (MetaTrader 5, CCXT, NinjaTrader, Tradovate) across three usage modes: full Terminal app, lightweight Browser mode, and a high-speed Trainer CLI for backtesting. Distributed as a native binary for Windows (NSIS installer) and Linux (.pacman, .deb, and AppImage packages), with core logic compiled to binary (Cython) to protect intellectual property.

Stack: Electron · Python (FastAPI, Uvicorn, WebSockets) · PyTorch · Transformers · XGBoost · Scikit-Learn · VectorBT · TA-Lib · MetaTrader5 · CCXT · Cython · Electron-Builder

AguaGestión — Management System for Bottled Water Distribution

Comprehensive management system for bottled water distributors and plants: equipment (dispenser) control under bailment or sale, per-customer current accounts, real-time deliveries and routes, product catalog, and business reporting. Built with an **offline-first** architecture: the delivery driver's mobile app works fully without an internet connection, automatically syncing in the background once connectivity is restored. Includes GPS-based smart routing that sorts pending deliveries by proximity, and an append-only ledger data model that guarantees full traceability and safe conflict

resolution across multiple offline devices.

Stack: Kotlin (native Android, Room/SQLite) · Node.js + Express · PostgreSQL 16 · React (Vite) · Docker + Coolify (self-hosted on AWS EC2)

JLF Distribuidora — AI WhatsApp Bot

Complete conversational system for a distribution business, featuring customer service protocol, order management system, product search algorithm, and automated upselling.

Stack: Next.js, Supabase, n8n, OpenRouter, Vercel

RapiVenta POS

Point-of-sale system for retail businesses, with inventory management, sales tracking, and reporting.

Stack: React, PostgreSQL, Supabase

Professional Portfolio

Professional presentation site and project hub.

Education

Systems Engineering — [National Technological University (UTN), Argentina]

[2004]

Languages

- **Spanish:** Native
- **English:** Advanced (B2/C1) — Advanced technical reading, fluent written and verbal communication for remote work environments

---

Additional Information

- **Experience:** 20+ years in technology, with active specialization in AI/LLM since 2023.
- **Profile:** Senior — does not require technical supervision, capable of leading architecture decisions and mentoring junior engineers.
- **Willing to travel / relocate:** YES — 100% remote.
- **Note:** age is not a limiting factor for technical quality or adaptability to new technologies. Accumulated experience is an asset, not an obstacle.
